IMPORTANT NOTIFICATION

10 D Applicant

From the

To:

ELI LILLY AND COMPANYet al.

- The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed inventions is patentable or not" (see also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

see separate sheet

Re Item III

Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

Claims 6-14 relate to subject-matter considered by this Authority to be covered by the provisions of Rule 67.1(iv) PCT. Consequently, the International Examination Authority fully concurs with the objection put forward by the International Search Authority and no opinion will be formulated with respect to the industrial applicability of the subject-matter of these claims (Article 34(4)(a)(I) PCT).

Re Item V

Reasoned statement under with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement Reference is made to the following document:

D1: WO-A-0101973

Novelty

The document D1 discloses enantiomeric morpholine derivatives and their use in the treatment of various diseases or conditions such as e.g. pain. The compounds of D1 structurally differ from the compounds of the present claim 1 in that they have oxygen in lieu of sulfur in the side chain an in that the said oxygen atom and the hydrogen atom at position 2 of the morpholine ring are always trans in terms of their relative configuration (see pages 4-6, formulae (I), (II), (IV); page 18, line 20 - page 19, line 19).

Consequently, in view of D1, novelty has to be acknowledged for the subject-matter of the present independent claims 1, 6-11 and 15 and the present dependent claims 2-5 and 12-14.

Inventive step

The distinguishing feature between the novel subject-matter and D1 can be seen as the particular novel combination of structural and stereochemical features already mentioned above, namely sulfur in lieu of oxygen and cis-configuration of sulfur and the neighbouring group R'.

EXAMINATION REPORT - SEPARATE SHEET

In the absence of any evidence for an unexpected technical effect linked to this feature, the objective problem underlying the novel subject-matter can merely be seen as the provision of further compounds useful in the treatment of various diseases or conditions such as e.g. pain.

However, since the claimed solution to this very general problem, namely the provision of the particular compounds of claim 1 having sulfur in lieu of oxygen and cis-configuration of sulfur and the neighbouring group R, was not derivable from D1, the presence of inventive activity has to be acknowledged for the said solution, even in the absence of a technical effect.

This applies even more, since in D1 only reference is made to compounds having trans-configuration so that the average artisan trying to find a solution to the above problem would have been rather led away from the said solution.

Industrial applicability

There is no doubt that the subject-matter of the present claims 1-5 is industrially applicable.

However, for the assessment of the present claims 6-14 on the question whether they are industrially applicable, no unified criteria exist in the PCT Contracting States. The patentability can also be dependent upon the formulation of the claims. The EPO, for example, does not recognize as industrially applicable the subject-matter of claims to the use of a compound in medical treatment, but may allow, however, claims to a known compound for first use in medical treatment and the use of such a compound for the manufacture of a medicament for a new medical treatment.
